- Finish: vertical seams
- Top: Reinforcement with eyelets every 20 cm
- Bottom: 10 cm pocket
- Sides: without finish
- Total weight: approx. 45 kg

### GENERAL CONDITIONS and DISCLAIMER FOR PROJECTION SCREENS:

- Unless otherwise specified, all high-frequency welded finished projection screens are folded for transport.
- To ensure that a projection screen is as wrinkle-free as possible, we recommend that it be rolled and shipped on a tube.
- Projection screens are sensitive to cold temperatures and must warm up to room temperature before removing from box otherwise permanent damage can occur.
- The PVC material used for our projection screens is thermo-elastic. Dimensional tolerances of 1-2% of the finished size can be expected during temperature and atmospheric changes or under load by the dead weight of the screen and/or bottom pipe. Claims due to dimensional changes as described above will not be honored.
